

Major Indian DTH and OTT Platform Transforms Security and Operations with Accops Secure Remote Access

CASE STUDY

About the Client

A dominant player in the Indian media landscape, this established content distribution company provides both Direct-To-Home (DTH) and Over-The-Top (OTT) services.

With roots dating back to 2001, the company's nationwide reach has transformed how millions of users experience television.

The platform boasts a strong legacy of innovation, having played a significant role in introducing a vast selection of channels to the Indian market. Today, this DTH leader offers over 630+ channels, including both standard (SD) and high-definition (HD) options, alongside a range of value-added services designed to enhance the viewing experience.

Challenges Faced

This prominent Indian content distribution company experienced growing challenges across its IT infrastructure. These included escalating cybersecurity threats, difficulties ensuring secure remote access for multiple partners, scalability limitations, access control complexities, and higher IT costs.

Cybersecurity Threats: Business productivity and security were compromised due to the constantly evolving cyber threat landscape.

Remote Access Concerns: Delays in onboarding and potential data breaches as managing secure remote access for numerous vendors and suppliers was complex.

Scalability: The inability to quickly adjust IT resources to meet fluctuating business needs resulted in missed opportunities and inefficiencies.

Compliance issue: The lack of granular application access controls led to increased security risks and potential compliance violations.

IT Costs: High operational costs were a direct result of the complexities of managing a traditional IT infrastructure

Problem Statement

This DTH and OTT platform confronted various obstacles within its IT management. With advancing technologies, the heightened threat of sophisticated cyberattacks remained a crucial concern. The necessity to enable secure remote access for a network of 300+ vendors and suppliers further heightened security risks around sensitive company information.

The company lacked the scalability needed to rapidly adapt its IT resources to fluctuating business demands. This rigidity hampered the organization's ability to maintain operational efficiency and respond effectively to market shifts.

Inconsistent access controls posed another serious risk factor. Ineffective user-specific application access permissions increased the likelihood for unauthorized access and potential data breaches, threatening the company's security and data integrity.

Finally, managing a complex IT infrastructure inevitably led to inflated costs for the company. Optimizing and simplifying IT operations became a high priority to decrease the financial burden and achieve overall efficiency.

Business Requirements

- To mitigate cyber risks in a changing threat landscape.
- Secure remote access for vendors and suppliers.
- Enhance scalability of IT resources.
- Improve access controls for better security.
- Reduce IT management expenses.

Implementing the Solution

To overcome these significant challenges, the company partnered with Accops to deploy a targeted range of innovative solutions. To streamline corporate resource access while enhancing security, Accops implemented desktop and application virtualization technologies. This centralized system drastically reduced the attack surface and risks associated with unauthorized access.

To ensure secure access for both employees and partners, Accops implemented a zero-trust application access gateway. This solution grants access based on strict verification, regardless of user location. In addition, Accops robust Identity and Access Management (IAM) solution provided granular control over user access and strengthened authentication processes.

An agentless, browser-based remote access solution from Accops eliminated the need for complex installations for vendors and suppliers, significantly simplifying secure connections and maintenance.

Lastly, the out-of-the-box advanced data leakage prevention features ensured compliance, preventing unauthorized sharing or disclosure of sensitive information.

Solutions Deployed:

- Virtualization.
- Zero trust-based application access for users to securely access corporate resources.
- Identity and access management with strong authentication for users.
- An agentless, zero-maintenance, browser-based remote access solution.
- Data leakage prevention feature to safeguard sensitive data from unauthorized disclosure.

Benefits Realized

The Accops solutions dramatically transformed the company's operations, delivering measurable benefits in multiple areas:

- **Efficiency:** Secure, seamless access to applications from any location boosted productivity for both employees and partners.
- **Security:** Robust, contextual access controls mitigated risks of unauthorized access and potential data breaches.
- **Cost Optimization:** Centralized IT management streamlined operations, reducing costs, and improving resource allocation.
- **Compliance Assurance:** Robust data leakage prevention technology simplified compliance efforts.
- **Scalability:** The ability to rapidly scale IT resources to meet dynamic business needs ensured the company's adaptability.
- **Sustainability:** A significant reduction in PC refresh cycles supported the company's commitment to eco-friendly IT practices.

Conclusion

By deploying Accops solutions, this major Indian DTH and OTT platform vastly strengthened its cybersecurity posture, enhanced operational efficiency, improved user experience, and advanced sustainability goals. The company is now significantly better positioned for continued growth and success within the competitive media industry.

Accops enables secure and instant remote access to business applications from any device and network, ensuring compliant enterprise mobility for business users while keeping governance with the organization.
