

Anywhere Access. Secure And Simplified.

Accops delivers all critical elements of the modern digital workspace through a single, unified platform.

With identity-centric, Zero Trust access, Accops enables secure and seamless connectivity to business applications from any device, anywhere ensuring strong security, governance, and complete control over users, devices, and data.

Two Consecutive Years In The Gartner® Magic Quadrant™ 2025 | 2026

WHAT WE DO

End-User Computing Virtualisation via application & desktop virtualisation (VDI). An end-to-end integrated solution, which is hypervisor-agnostic, infrastructure/cloud-agnostic, and can be deployed on cloud or on-premises.

ZTNA Application Access Gateway to enable secure remote access at application layer without network bridging. SPAN technology-based, supports access at Layer 7, Layer 4, and Layer 3. Available for mobile app, desktop client and web-based access.

Identity & Access Management solutions to protect cloud & on-premises applications with adaptive, context-aware MFA and SSO. Easily integrates with all modern and legacy applications. Supports all token types, such as Email & SMS OTP, PC Token App, Mobile App, Hardware Token, Push notifications over mobile and laptop, as well as biometrics and passwordless login.

Energy-efficient Endpoint Devices to directly replace legacy PC-based computing, dramatically reducing the IT carbon footprint and procurement costs. These VDI-optimised, centrally managed hardware devices deliver high-performance streamable applications and desktops while retaining local computing power for diverse end-user requirements.

All-in-One Platform for Secure Hybrid Work

Accops Digital Workspace provides a single, secure platform to deliver virtual apps and desktops, enable identity-based access with MFA & SSO, and manage endpoints. Powered by a ZTNA gateway, it ensures seamless, secure access to corporate resources from anywhere.

One Solution For All Your Use Cases

Accops enables compliant enterprise mobility for business users while keeping governance with the organization.

WE ALSO OFFER

- **Remote Browser Isolation** for secure web access and internet isolation, critical for financial and public sector organisations.
- **AirBridge**—a bespoke solution for secure file transfers and communication within highly sensitive air-gapped networks.
- **AI-Powered Deepfake Detection** integrated into our biometric authentication system, protecting against synthetic identity fraud and V-KYC risks.
- **Mobile Device Management** delivers unified governance and adaptive security for all enterprise endpoints, spanning corporate assets and employee-owned devices.
- **Virtual ICT Labs solution** specifically designed for universities, colleges, and training institutes.
- **Huddle for on-premise**, secure remote support, specifically designed for isolated government and PSU networks.
- **Vajra-Secure Browser** provides enterprise-graded security for remote workforces and third parties, ensuring zero data leakage and strict compliance for sensitive web applications.
- **Support for open-source hypervisors**, enabling scalable and cost-effective VDI adoption.
- **Accops Photon** is a purpose-built display protocol for multimedia and graphics-heavy applications, with audio-video offload for a smoother experience on standard network conditions.
- **Accops Spectra (CMS)** is a unified endpoint management platform covering Windows, macOS, Linux, Android, iOS and thin clients from a single cloud console, with software distribution, patch orchestration, remote access and built-in compliance reporting for frameworks like SOC 2, ISO 27001 and GDPR.
- **Accops HyID SSO** uses a browser plugin, deployable via group policy or endpoint management, to automate login for legacy apps using vaulted credentials. For AD-integrated apps, it issues a fresh random password each session through an LDAP proxy, so the app never talks to AD directly, enabling true passwordless login.

Sovereign By Design. Not By Exception.

India's economy is digitizing faster than any major nation. Its cybersecurity investment hasn't kept pace — and access infrastructure is the most exposed layer of all.

WHAT'S AT STAKE

Foreign Kill Switch: Foreign vendors can unilaterally suspend critical operations during diplomatic or regulatory disputes, as seen in recent cases where a global cloud provider suspended essential services over foreign sanctions, bypassing Indian jurisdiction entirely.

Black Box Software: No source code access or independent audit rights means enterprises can't verify or trust what's actually running their access layer.

Legal Exposure: Foreign-hosted access infrastructure remains subject to extraterritorial laws like the US CLOUD Act and FISA 702, putting Indian data and operations under a jurisdiction India doesn't control.

BUILT ON INDIAN GROUND

100% Made-in-India IP: Product, source code, and engineering ownership reside with resident Indians, governed entirely under Indian law, with zero foreign kill-switch risk.

Critical Infrastructure Grade: Purpose-built to meet the "Critical Infra vs Commodity" bar being defined for national digital infrastructure, not just another compliant vendor checkbox.

DPDPA-Ready by Architecture: Zero Trust controls, including contextual MFA, VDI-based data containment, and CERT-In ready audit trails, engineered to meet DPDPA's core mandates on lawful processing, data minimisation, and breach reporting.

Trusted By Leading Organizations

From India's largest public sector enterprises and financial institutions to organizations across manufacturing, healthcare, and IT, Accops secures the digital workspaces of enterprises that power the Indian economy, enabling seamless, compliant access to critical applications, desktops, and data.

With a strong focus on security, performance, and simplicity, Accops empowers organizations to adopt modern work models without compromising on protection. Our solutions support secure remote access, strong authentication, and endpoint compliance, helping IT teams maintain visibility and control across distributed workforces.

The trust placed in Accops by our customers reflects our ability to deliver reliable, scalable, and sovereign digital workspace solutions built for India's regulatory and operational reality.

Get most out of your investment

Explore **Accops Digital Workspace** today for secure and seamless work from anywhere.

- ✓ **ZTNA, VDI, MFA, SSO, Thin Client & MDM - All In One:** An integrated, one-stop solution for secure remote access, VDI, IAM, and endpoint management.
- ✓ **Flexible & Cost-effective Licensing:** Cost-effective solution with up to 40% lower TCO through flexible licensing models.
- ✓ **Custom Deployment for Isolated and Hybrid environments:** Custom-designed and hypervisor/cloud-agnostic to fit perfectly into all environments, on-premises or cloud.
- ✓ **Vendor Stability & Innovation:** Continuous innovation and backing by the Reliance Group ensures advanced security and stability.
- ✓ **Assured Support & Customisation:** Dedicated support to provide customisation, consultation, and alignment with business needs.
- ✓ **Robust, Global Channel Ecosystem:** 200+ Partners ensures seamless, localised expertise and service delivery with a robust global footprint.
